GO Biological Processes — AD Upregulated Genes
small GTPase−mediated signal transduction
positive regulation of apoptotic process
regulation of small GTPase mediated signal transduction
actomyosin structure organization
intrinsic apoptotic signaling pathway in response to DNA damage
cellular response to zinc ion
intracellular zinc ion homeostasis
vascular associated smooth muscle cell differentiation
response to copper ion
detoxification of copper ion
stress response to copper ion
cellular response to cadmium ion
stress response to metal ion
coronary vasculature development
detoxification of inorganic compound
