GO Biological Process Enrichment
Upregulated genes in GSE132903
actomyosin structure organization
cellular response to zinc ion
small GTPase−mediated signal transduction
detoxification of copper ion
stress response to copper ion
regulation of small GTPase mediated signal transduction
cellular response to cadmium ion
intracellular zinc ion homeostasis
vascular associated smooth muscle cell differentiation
positive regulation of apoptotic process
stress response to metal ion
response to copper ion
coronary vasculature development
intrinsic apoptotic signaling pathway in response to DNA damage
detoxification of inorganic compound
